

## Warning to All People on the Earth

*Monstrous cataclysms of the Earth will take place in the second half of 2012.*

*Huge tsunamis will attack all the surface of the Earth probably except for Tibet.*

*The surface of the Earth probably from 30 to 50 percent will permanently sink into the sea.*

*Besides, the extremely fearful things will take place.*

*The mechanism of the cataclysms is written below.*

*Let's build great many numbers of big ships to fly in the air by the power of the superconductive electromagnetic engines.*

*The big ships take up the people and so on, and protect the human race and their civilizations from the cataclysms.*

*The "Kyusei-kokumin-doumei" (National Union for Salvation) is in active for taking the reins of government in Japan to build the big ships.*

*The representative of "Kyusei-kokumin-doumei" is me.*

## Mechanism of Monstrous Cataclysms of the Earth

By Hidefumi Kubota

By studying religions and predictions I think that the monstrous cataclysms of the Earth will take place in the second half of 2012. This coincides with the fact that the solar wind is estimated to become the strongest from 2011 to 2012. I think that the solar storm is the cause of the cataclysms of the Earth. I think that the cataclysms are accompanied by Pole Shift in a short time. Well, what is the cause to make the Pole Shift take place in the short time? There is a magnetic field made by the Earth itself as shown pointing of magnets to the north of the Earth. This magnetic field is called geomagnetic field.

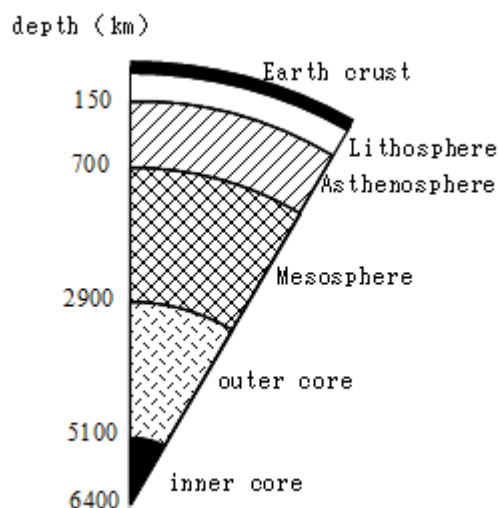

To think of the cataclysms scientifically, I try to think about the Pole Shift with distinguishing a shift of geomagnetic poles from a shift of rotation axis of the Earth. Since I think of the change of geomagnetic field in the relation with magnetism inside the Earth, I think about geomagnetic poles. I think that the reverse of the geomagnetism in the short time by the solar wind is the cause of the cataclysms of the Earth. I think that the reverse of geomagnetism in the short time by a solar storm causes huge diastrophisms and it moves the rotation axis of the Earth. Generally, reverses of geomagnetism take place after spending long time. Why does this reverse of geomagnetic poles take place in the short time? I think that a great disaster of the sun is the cause. The Maya had a fear of the sun, worshiped, observed it and made a correct

calendar based on the sun. The calendar predicts the end in 2012. Also, the sun gives the mercy of sunlight and so on and the celestial body which has strongest influence on the Earth is the sun. It is natural to think that the sun is the cause.

With the great disaster of the sun, very strong solar winds (phenomenon that the hot atmosphere of most outer layer of the sun escapes from its gravity field) runs in the solar system through and fills it partly. A very strong magnetic field is made in the solar system by one of the winds. There will be an area where lines of magnetic force to make the geomagnetism reverse are filled. During the time when the power of the area is strongest by the strongest solar storm, the Earth will pass in the area. The mighty magnetic field of the solar storm caused by the sun activity influenced the Earth and the geomagnetism will be reversed in the short time. Why does the great disaster of the sun take place around 2012? It will be possible to say the result of the periodic activity of the sun. Also, the influence of the galaxy center may be thought of.

I try to think of the mechanism of the reverse of the geomagnetism by the influence of the magnetic field (of the solar storm) in the space.

Figure A: Inside of the Earth

First, the influence of the mighty magnetic field in the space reaches parts upper than outer core of the Earth. Next, both the influence of the mighty magnetic field in the space and the influence of the parts upper than the outer core reach outer core. By the influence of this mighty magnetic field and so on, the direction of electric currents which flows through fluid of the outer core will be reversed. The reason why the direction of the electric currents can be reversed is that the electric currents are not fluid itself and they are aggregates of electrons

which flow through the fluid. The reverse of the direction of these electric currents has an electromagnetic influence on the conductive fluid of outer core which has magnetism and the motional direction of the fluid will be reversed. By this reverse, the direction of the magnetic field which Dynamo of the Earth generates will be reversed.

As for the Dynamo of core of the Earth, accepted theory says it is the main cause of geomagnetism. Resultantly, the reverse of the geomagnetism in the short time will surely take place.

What is the mechanism of huge diastrophisms caused by the reverse of geomagnetism in the short time? The heat convection of mantle is the main cause of tectonics. According to plate tectonics, the heat of core is carried to the surface of the Earth through circuits inside the Earth and geological phenomenon arise. Let's pay attention to the reverse of the motional direction of the fluid of outer core in the process of the reverse of the geomagnetism. Since the motional direction of the fluid of outer core is reversed, the circuit of heat, the motional direction of the heat of core which is conveyed with the motion of the fluid of outer core will have an important change. Though the heat convection of core and the heat convection of mantle compose different flows, the change of the flow of heat convection of core necessarily will give a change to the heat convection of mantle. Since the motional direction of the heat of core has the big change, the heat convection of mantle will have a big change. Rising parts of mantle will move very much. As a result of the big movement, I think that falling parts of mantle which is the fragile break of the surface of the Earth will become new rising parts. Then, I think that most of the old rising parts will change into new falling parts. Since the heat convection of mantle has a big change in this way, the huge change of earth crust riding on the heat convection of mantle will arise. The huge diastrophisms will take place and the land becomes the sea and the sea becomes the land.

As a result of the huge diastrophisms, by shivering and moving of earth crust, the balance of gravity of the surface of the Earth will collapse. In addition to this, by the motional change of fluid inside the Earth, i.e. the change of motional direction of Asthenosphere and outer core, the balance of gravity inside the Earth is shaking. By these changes of balance of gravity, the Earth itself totters and the rotation axis of the Earth shifts. When the rotation axis shifts, the Earth will have huge influence on its climate which is related to the inclination of the rotation axis. As its result, the Earth will have a huge climate change.

It is a severe result of the biggest sun activity to give a huge influence to the Earth.

In this way, the monstrous cataclysms attack the Earth and creatures on the Earth, of course, including human beings and their civilizations.
